**DEPARTMENT OF MATHEMATICS**

**COURSE OUTCOMES**

**2017-18**

**Course I: Differential Calculus**

- CO<sub>1</sub>: Understand the concept of mean value theorems and its applications.
- CO<sub>2</sub>: Able to find out the LUB and GLB of set.
- CO<sub>3</sub>: Able to solve the examples based on absolute values and inequalities.
- CO<sub>4</sub>: Able to define the limits and continuity and to solve examples based on it.
- CO<sub>5</sub>: To understand the algebra of limits and continuity.
- CO<sub>6</sub>: Able to state L-Hospital's rule and use it to compute limit of indeterminate forms
- CO<sub>7</sub>: Understand the arithmetical properties and postulates of the real numbers.
- CO<sub>8</sub>: Able to solve the inequalities.
- CO<sub>9</sub>: Understand the relation between multiplication of two positive integers and any real number
- CO<sub>10</sub>: Understand the concept of Leibnitz theorem and its applications

**Course II: Algebra and Trigonometry**

- CO<sub>1</sub>: They will be able to formulate problems in the language of sets and perform set operations and will be able apply the fundamental principle of counting, multiplication principle.
- CO<sub>2</sub>: Able to do partition of set and to write the equivalence class of set.
- CO<sub>3</sub>: Understand the De-Morgan's laws and the concept of countable and uncountable sets.
- CO<sub>4</sub>: Understand the De-Moivre's theorem and simplify the complex numbers using it.
- CO<sub>5</sub>: Describe the summation of series and the concept of logarithm of complex numbers.

CO<sub>6</sub>: Develop skills in solving problems.

CO<sub>7</sub>: Understand the concept of Factor theorem and remainder theorem.

CO<sub>8</sub>: Able to use Factor theorem to solve the polynomials.

CO<sub>9</sub>: Students will understand the different types of matrices.

CO<sub>10</sub>: They understand the expansion of 4<sup>th</sup> order determinants and properties of symmetric and skew symmetric determinants.

CO<sub>11</sub>: Understand the meaning of rank of matrix and properties of rank of matrix.

CO<sub>12</sub>: Learn to describe the relationship between polynomial long division and synthetic division.

CO<sub>13</sub>: Evaluate polynomials using remainder theorem.

CO<sub>14</sub>: Able to find out the roots of cubic, biquadrate and quadratic equations.

### **Course III: Differential and Integral Calculus**

CO<sub>1</sub>: Able to understand the concept of polar coordinates and polar curve.

CO<sub>2</sub>: Explain the concept of polar sub tangent and polar sub normal's.

CO<sub>3</sub>: Understand the concepts of curvature, radius of curvature in Cartesian and polar forms.

CO<sub>4</sub>: Improving skill of solve examples on limits and continuity of functions of two variable.

CO<sub>5</sub>: Explain the concept of Evolutes and Involutives.

### **Course IV: Algebra and Geometry**

CO<sub>1</sub>: Understand the concept of division algorithm properties of prime and composite numbers.

CO<sub>2</sub>: Able to prove fundamental theorem of arithmetic, bracket function, Euler's function, Fermat and Wilson's theorem and solve examples on it.

CO<sub>3</sub>: Understand the concept of equation of sphere, section of sphere by a plane

CO<sub>4</sub>: Explain the concept of equation of cylinder, enveloping cylinder and right circular cylinder.

CO<sub>5</sub>: Understand the concept of cone and its applications.

### **Course V: Mathematical Logic and Real Analysis**

CO<sub>1</sub>: Determine if a compound statement is negation, conjunction, disjunction, conditional or bi-conditional.

CO<sub>2</sub>: Understand the concept of inverse, converse and contra positive and construct

the truth tables for it.

CO<sub>3</sub>: Determine if an argument is valid or invalid by using truth tables.

CO<sub>4</sub>: Develop skills in constructing truth tables

CO<sub>5</sub>: Derive rule for determining the general term of an arithmetic sequence.

CO<sub>6</sub>: Able to solve problem on that involves arithmetic sequence.

CO<sub>7</sub>: Derive rule for determining the sum of an arithmetic series.

CO<sub>8</sub>: Understand the concept of Cauchy's first theorem and solve the examples on it.

CO<sub>9</sub>: Understand an example of geometric sequence and solve problems that involves the geometric sequence

### **Course VI: Group theory, Integral Calculus and Differential Equations**

CO<sub>1</sub>: Understand the concept of group, semi group, subgroup, cyclic group and their properties.

CO<sub>2</sub>: Determine whether a given set and binary operation form a group by checking group axioms.

CO<sub>3</sub>: Identify the cyclic group and their generators.

CO<sub>4</sub>: Explain groups and subgroups using Lagrange's theorem

CO<sub>5</sub>: Able to find the length of arc, surface areas and volume of solids of revolution for standard curves whose equations are given in Cartesian, polar and parametric forms.

CO<sub>6</sub>: Understand the first order first degree differential equations.

CO<sub>7</sub>: Improving skill of solve homogeneous, non-homogeneous, linear, Bernoulli's and exact differential equations.

CO<sub>8</sub>: Able to solve non exact differential equations by finding the suitable integrating factors.

CO<sub>9</sub>: Improving skill of solve differential equation of first order higher degree.

CO<sub>10</sub>: Understand the concept of Clairtau's equation.

### **Course VII: Vector Calculus and Infinite Series**

CO<sub>1</sub>: Derive rule for determining the sum of n terms of geometric series and solve problems on it.

CO<sub>1</sub>: Generalize rule for determining the sum of infinite geometric series and solve problems that involves a geometric sequence and series.

CO<sub>3</sub>: Able to explain why a geometric series is convergent and divergent.

CO<sub>4</sub>: Define concepts of point and vector and explain differences and similarities between them.

CO<sub>5</sub>: Memorize algebraic definitions and explain geometric meanings of dot and cross products.

CO<sub>6</sub>: Calculate directional derivatives and gradients.

CO<sub>7</sub>: Able to solve the examples based on double and triple product, gradient, divergence and curl of vectors.

### **Course VIII: Group Theory, Fourier Series and Differential Equation**

CO<sub>1</sub>: Able to define normal subgroups, quotient groups.

CO<sub>2</sub>: Understand the concepts of homomorphism and isomorphism of groups.

CO<sub>3</sub>: Develop the skills on solving the problems on Fourier transforms.

CO<sub>4</sub>: Able to define Periodic functions, fourier series of odd and even functions.

CO<sub>5</sub>: Develop the skills on solving the problems on linear differential equation of nth order.

CO<sub>6</sub>: Understand the concepts of higher order exact differential equations and its applications.

### **Course IX: Real Analysis**

CO<sub>1</sub>: Understand the concept of beta and gamma functions and relation between them.

CO<sub>2</sub>: Able to use beta and gamma functions to solve variety of problems.

CO<sub>3</sub>: Understand the concept of recurrence formula and duplication formula.

CO<sub>4</sub>: Understand the concept of double and triple integrals and develop the skills in solving the problems on it.

CO<sub>5</sub>: Compute triple integrals in rectangular, cylindrical and spherical co-ordinates.

CO<sub>6</sub>: Understand the Leibnitz's theorem and develop the skills in solving problems related to Leibnitz's theorem.

CO<sub>7</sub>: Develop the skills on solving the problems on improper integrals.

### **Course X: Numerical Analysis**

CO<sub>1</sub>: Able to use Bisection method, iteration method Newton Raphson method to solve the examples.

CO<sub>2</sub>: Understand the concepts of Gauss Seidal method and its applications.

CO<sub>3</sub>: Able to define forward and backward formulae.

CO<sub>4</sub>: Able to explain formation of first and second linear difference equation with

constant coefficients.

CO<sub>5</sub>: Explain the concept of Eulers, Picard and Runge-Kutta method of order two.

### **Course XI: Dynamics and Calculus of Variation**

CO<sub>1</sub>: Able to understand the concept of dynamics and kinetics.

CO<sub>2</sub>: Able to explain velocity and acceleration of particle along plane curve.

CO<sub>3</sub>: Understand the concepts of tangential and normal components of velocity and acceleration.

CO<sub>4</sub>: Explain the concept of Euler's equation- and its applications.

CO<sub>5</sub>: Understand the concepts of Brachistochrone problem and isoperimetric problems.

### **Course XII: Differential Equations**

CO<sub>1</sub>: Develop the skills on solving the problems on simultaneous differential equation with two and three variables.

CO<sub>2</sub>: Able to define concepts of Power series, ordinary and singular points.

CO<sub>3</sub>: Understand the concepts of Frobenius method and its applications.

CO<sub>4</sub>: Develop the skills on solving the problems on Charpits method

CO<sub>5</sub>: Understand the concepts of Rodrigues formula and its applications.

### **Course XIII: Complex Analysis and Ring Theory**

CO<sub>1</sub>: Able to define analytic function, Cauchy-Reimann equations.

CO<sub>2</sub>: Explain the Cauchy's theorem, Morera's theorem and its applications

CO<sub>3</sub>: Explain the concepts of Residue theorem, Jordan's lemma and contour integration.

### **Course XIV: Topology and Laplace Transforms**

CO<sub>1</sub>: Able to define open set, closed set, closure of set and boundary points of set.

CO<sub>2</sub>: Understand the concepts of base, sub-base, separation axioms.

CO<sub>3</sub>: Develop the skills on solving the problems on Laplace transforms.

CO<sub>4</sub>: Understand the concepts Dirac-delta function, unit step function and convolution theorem.

CO<sub>5</sub>: Understand the concepts of convolution theorem and its applications.
